ACR-1™

REMOTE LEVEL CONTROL

Add volume control to any system

The ACR-1 is a remote level control designed to work with specific AudioControl line output converters and processors. The ACR-1 can be surface or custom-mounted to add level control or total system volume control, and more to your audio system. Installation is simple and no power is required.

Placement And Mounting of the ACR-1

The ACR-1 may be mounted under a dash or console using its own bracket or through custom mounting holes in the dash/console. It should be within reach of the driver and in a spot where the LED is plainly visible.

Bracket Installation

ACR-1 mounts with four screws, which attach to the underside of a dashboard/console. Slide under the dash or console and place the ACR-1 in its mounting position, mark the mounting holes, drill pilot holes, and secure with screws.

Custom Installation

For that custom, finished look, the ACR-1 can be flush mounted directly on the dash/console panel (or anywhere else). Referencing the drawing right, disassemble the ACR-1. Drill a 9/32" (7 mm) hole in the panel for the control along with a 3/32" (2.3 mm) hole for the lock tab and a 1/8" (3 mm) hole for the LED. Reassemble the ACR-1 components on the dashboard or console.

What's Included?

ACR-1 Remote Level Control, 20' Phone Cable (RJ-11)
