# ACR-2™

## REMOTE LEVEL CONTROL

### Add volume control to any system

The ACR-2 is a remote level control & function switch designed to work with specific AudioControl processors. The ACR-2 can be surface or custom-mounted to add subwoofer level control and function switching to your audio system. Installation is simple and no power is required.

### Placement And Mounting of the ACR-2

The ACR-2 may be mounted under a dash or console using its own bracket or through custom mounting holes in the dash/console. It should be within reach of the driver and in a spot where the LED is plainly visible.

#### Bracket Installation

ACR-2 mounts with four screws, which attach to the underside of a dashboard/console. Slide under the dash or console and place the ACR-2 in its mounting position, mark the mounting holes, drill pilot holes, and secure with screws.

#### Custom Installation

For that custom, finished look, the ACR-2 can be flush mounted directly on the dash/console panel (or anywhere else). Referencing the drawing right, disassemble the ACR-2. Drill a 9/32" (7 mm) hole in the panel for the control along with a 3/32" (2.3 mm) hole for the lock tab and a 1/8" (3 mm) hole for the LED. Reassemble the ACR-2 components on the dashboard or console.

#### What's Included?

ACR-2 Remote Level Control, 20' Phone Cable (RJ-11)
